When one considers the role of AI in our society, it might be easy to focus on the downsides. However, it's essential to remember that there are huge benefits that AI systems already bring to society and that they have the to be even more beneficial. Current AI technology is central to services you yourself might use all the time, sometimes without even knowing that AI is involved, speech transcription, GPS navigation and trip planning, email spam filters, language translation, credit-card fraud alerts, book and music recommendations, protection against computer and optimizing energy usage in buildings.

If you are a photographer, film-maker, fine artist or musician, you might be using AI systems that assist you in creative projects, programs that help photographers edit their photos or assist composers in music notation or arrangements. If you are a student, you might benefit from 'intelligent tutoring systems' that to your particular learning style. If you are a scientist, there's a good chance you have used one of the many available AI tools that analyse your data. If you are or otherwise visually disabled, you might use smartphone computer-vision apps that read handwritten or printed text (for example, on signs, restaurant menus or money). If you are hearing-impaired, you can now see quite accurate captions on YouTube videos and, , get real-time speech transcription during a lecture. These are just a few examples of the ways in which current AI tools are improving people's lives. Many additional AI technologies are still in research mode but are on the verge of becoming mainstream.

In the near future, AI applications will probably be widespread in healthcare. We will see AI systems assisting physicians in diagnosing diseases and in suggesting treatments; discovering new drugs; and the health and safety of the elderly in their homes. Scientific modelling and data analysis will

increasingly rely on AI tools — for example, in improving models of climate change, population growth and demographic change, ecological and food science, and other major
